No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

Sequence 6407, Application US/09513999C

Patent No. 6783961

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Duclert, A.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

PATENT APPLICATION NUMBER: US/09/513,999C

CURRENT APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

SOFTWARE: PATENT PENTION

SEQ ID NO 6407

LENGTH: 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 12, Application US/09015734

Sequence 12, Application US/09015734

Patent No. 6057127

GENERAL INFORMATION:

APPLICANT: Weber, Eric R.

APPLICANT: WcCall, Catherine A.

TITLE OF INVENTION: NOVEL EQUINE FC EPSILON RECEPTOR ALPHA

TITLE OF INVENTION: CHAIN NUCLEIC ACID MOLECULES, PROTEINS AND USES THEREOF

NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: Heeke Corporation

STREET: 1825 Sharp Point Drive

CITY: Fort Collins

CITY: Fort Collins

COUNTRY: USA

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: IBM PC compatible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        52.1%; Score 38; DB 4; Length 136; 54.5%; Pred. 1. Sequence 2, Application US/09015734

1. Sequence 2, Application US/09015734

1. Patent No. 6671127

GENERAL INFORMATION:

APPLICANT: Weber, Eric R.

APPLICANT: Wordel L.

APPLICANT: Worder Resear, Carporation

STREET: 1825 Sharp Point Drive

STREET: 1825 Sharp Point Drive

STREET: 1825 Sharp Point Drive

CITY: Fort Collins

STREET: 1825 Sharp Point Drive

STREET: 1825 Sharp Point Drive

CONTYR: USA

ZIP: 80525

COMPUTER: END POINT DRIVE

MEDIUM TYPE: Floppy disk

COMPUTER: Port Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Worderfect for Windows, Version 7.0

CURRENT APPLICATION NUMBER: US/09/015,734

FILING DATE: 29-DAN-1998

CLASSIFICATION NUMBER: US/459

REFERENCE/DOCKET NUMBER: D1-4

US-00-601-478-5

Sequence 5, Application US/09601478

Patent No. 6403785

GENERAL INFORMATION:

APPLICANT: Ostuka Pharmaceutical Co., Ltd.

TITLE OF INVENTION: Human TSC403 gene and human ING1L gene

FILE REFERENCE: Q60193

CURRENT APPLICATION NUMBER: US/09/601,478

CURRENT PILING DATE: 2000-08-03

PRIOR FILING DATE: 1998-03-05

PRIOR FILING DATE: 1998-03-05

PRIOR FILING DATE: 1998-02-03

US-10-065-133A-95

Sequence 95, Application US/10065133A

Patent No. 6685946

GENERAL INFORMATION:

APPLICANT: Dowling, Patricia W.

TITLE OF INVENTION: COLD-ADAPTED EQUINE INFLUENZA VIRUSES

FILE REFERENCE: EQ-1-C2-1

CURRENT APPLICATION NUMBER: US/10/065,133A

CURRENT FILING DATE: 2002-12-10

PRIOR APPLICATION NUMBER: O9/133,921

PRIOR FILING DATE: 1999-08-13

NUMBER OF SEQ ID NOS: 108

SOFTWARE: Patentin version 3.1

SEQ ID NO 95

TYPE: PRI

TYPE: PRI

CURRANTE: Butine influenza virus H3N8

Sequence 13, Application US/10812238A

Publication No. US20050002904A1

GENERAL INFORMATION:

APPLICANT: Wary, Kishore, K.

APPLICANT: Wary, Kishore, Yoseph O.

TITLE OF INVENTION: Uses of Vascular Endothelial Growth Factor

TITLE OF INVENTION: and Type I Collagen Inducible Protein (VCIP)

FILE REFERENCE: D6563

CURRENT APPLICATION NUMBER: US/10/812,238A

CURRENT FILING DATE: 2004-03-29

PRIOR PILING DATE: 2003-03-27

NUMBER OF SEQ ID NOS: 36

SEQ ID NO 13

LENGTH. 2011
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         APPLICANT: Wary, Kishore, K.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 2, Application US/1081238A

Fublication No. US2005000204A1

GENERAL INFORMATION:

APPLICANT: Wary, Kishore, K.

APPLICANT: Wary, Kishore, K.

TITLE OF INVENTION: and Type I Collagen Inducible Protein (VCIP)

FILE REPERENCE: D6563

CURRENT APPLICATION NUMBER: US/10/812,238A

CURRENT PILING DATE: 2004-03-29

FRIOR APPLICATION NUMBER: US 60/458,164

FRIOR FILING DATE: 2003-03-27

NUMBER OF SEQ ID NOS: 36

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
